

Ideas for drug pricing workgroup proposals:

- MD-type anti-gouging bill but with a separate entity to decide if individual price increases are unconscionable or fair
 - Then refer to the AG's office for possible prosecution
- Misleading market protections
 - Prohibit coupons
 - Prohibit dispense as written (DAW) prescriptions
- Add adherence assistance, monitoring to care coordination contracts, performance measures for value-based payments
- Add prescriber communication with patients about drug prices, barriers, what each medication does, patient priority setting, alternatives added to care coordination contracts, performance measures for value-based payments
- Public utility model for drug price oversight (see MD- type proposal above)
- Seek reimportation authority from Canada
